

Hey!

Thanks for your time so far - we're excited to learn more about how you build (we'll compensate you for your time regardless of the outcome) 🛠️

**The challenge (outcome-oriented, not a puzzle):**

- You'll create a small tool that ingests match events and produces a Story (a JSON bundle of Pages) plus a preview to browse the slides.
- This mirrors real work on Storyteller (we power Stories on iOS/Android/Web for major sports/media brands).
- The basis of the task can be found by [clicking this link](#).
- We'll compensate you with 100 euros for the completion of the task, so please include your IBAN and BIC/SWIFT code over email when you return the task.

**What we're looking for:**

Your goal is to produce the best possible story-based summary of the game and the best possible experience for viewing that Story.

How you achieve that is up to you.

The task is intentionally open-ended so that we can see how you think about the product and what you choose to implement, as well as being able to look at the code and how you choose to structure that.

**AI policy:**

You may use AI coding assistants. Please include a file describing where AI helped, any particularly helpful techniques, which tools/models you used and anywhere you chose not to use AI.

**What to submit:**

Once you are done, please create a repo on Github containing your solution and add Dave Miscampbell ([dave@getstoryteller.com](mailto:dave@getstoryteller.com)) and fnabrdal ([filip@getstoryteller.com](mailto:filip@getstoryteller.com)) so we're able to review in advance of our next call.

**Payment:**

Please send us your IBAN and BIC when you return the task, we'll compensate you with 100 euros for your time.
